

The **iSTEAM** range

Dry steam technology for belt sanitation

- **Belt Sanitation Unit (BSU)**
- Portable belt sanitation for use in multiple locations
- Fully integrated systems are available, built into product line
- Belt sanitation units outperform other belt washing systems in the market
- Reduces chemical & disinfectant usage through dry steam technology
- Reduces Cleaning costs & speeds up cleaning tasks
- Enables cleaning in dry environments
- Speeds up product change overs
- Reduce effluent discharge

- In the first chamber dry-steam clean & disinfects the belt in the moving direction
- In the second chamber, located at the bottom of the BSU, all residues and the steam are vacuumed leaving the surface touch dry

- Belt Cleaning and sanitising possible during production process
- Steam can be applied to both sides of the belt and the belt direction can be varied during the cleaning process.
- After the cleaning process the belt will be dry, allergen free and sanitised
